

NITHIN MOORTHY

Senior Technical Product Manager | Developer Platforms, APIs, SDKs & AI Infrastructure
Greater Seattle Area (Remote) | nithinmoorthy11@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY

Senior Technical Product Manager with a software engineering background and 5+ years at Auth0/Okta owning developer-facing platform products: APIs, SDKs, developer console, docs, and integration surfaces used by enterprise customers running production workloads. Strong opinions on API design ergonomics, versioning, backward compatibility, and what makes a developer experience feel polished. Hands-on builder of AI-native systems with LangChain, LangGraph, and MCP. Operates analytically: defines success metrics before shipping, instruments thoughtfully, and iterates with engineering rather than over-specifying upfront.

CORE COMPETENCIES

- API and SDK product strategy: interface design, ergonomics, versioning, backward compatibility, and developer-experience polish
- Developer tooling surfaces: console, docs, credential and access management, usage analytics, observability, and sandbox environments
- Infrastructure as a product: translating system-level capabilities into clearly differentiated, customer-facing features
- AI ecosystem fluency: LangChain, LangGraph, MCP, agent orchestration, RAG, prompt and tool design, LLM evaluation
- Analytical product practice: defines success metrics up front, instruments thoughtfully, and pairs quantitative with qualitative feedback

SKILLS HIGHLIGHTS

Developer Platforms: API-First Product Design, REST APIs, SDK Strategy, API Versioning, Backward Compatibility, Developer Console & Docs, Credential & Access Management, Usage Analytics, Observability, Sandbox Environments, Self-Service Onboarding

AI & LLM: LangChain, LangGraph, MCP, Agent Orchestration, RAG, Tool Calling, Prompt & Tool Design, LLM Evaluation, Snowflake Cortex

Product & Leadership: Product Roadmapping, Success Metrics & Instrumentation, A/B Testing & Experimentation, Funnel Analytics, User Research, PRD Authoring, Multi-Team RFCs, Bias to Action

Technical: JavaScript, TypeScript, React, Node.js, Python, SQL, Snowflake, OAuth 2.0, OIDC, System Architecture, Data Pipelines

PROFESSIONAL EXPERIENCE

Senior Product Manager, Developer Platform | [Auth0](#) | [Okta](#) Jan 2021 – Present

- Own developer-facing API and platform surfaces across Auth0/Okta (authentication APIs, account management APIs, SDKs, developer console, docs, and onboarding) used by enterprise customers running production integrations.
- Set direction on API ergonomics, versioning, and backward compatibility across high-scale surfaces, including consolidating factor listing, enrollment, challenge, verification, update, and deletion into a unified self-service API model that reduced integration complexity for SPA and native-app developers.
- Drove a multi-team RFC consolidating legacy WebAuthn and newer passkeys implementations onto a unified authentication-method model from proposal through shipped code, holding deprecation, migration, and developer-communication tradeoffs across customer-facing product teams.
- Built an LLM-powered analysis engine over thousands of customer authentication Actions, classifying implementation patterns and transpiling fragmented logic into a structured low-code policy model, achieving 95% classification accuracy and 76% transpilation accuracy. Drove prompt design, tool design, evaluation methodology, and the human-in-the-loop review pipeline end to end.

- Designed a unified low-code policy framework adopted across multiple product teams, replacing fragmented per-team solutions with a shared platform capability that translated infrastructure-level capabilities into a coherent customer-facing surface.
- Defined and instrumented platform success metrics up front (adoption, activation, success rate, time-to-integrate, error reduction), contributing to 15% YoY adoption growth and a 30% increase in downstream product engagement. Paired quantitative funnel data with qualitative developer feedback to prioritize.
- Led strategy and a comparative evaluation of agent authentication approaches across Auth0, Clerk, and Descope (developer experience, fine-grained authorization, agent identity, delegation), informing how Auth0 should evolve for AI agents acting on behalf of customers.
- Authored business cases, technical PRDs, executive narratives, and developer-facing enablement materials that aligned Engineering, Design, Developer Relations, and GTM around shared roadmaps and measurable outcomes.

Senior Solutions Architect | [Zenoti](#)

Apr 2019 – Jan 2021

- Partnered with Product and Engineering to influence roadmap decisions through enterprise customer feedback, competitive insights, and demo-driven validation.
- Led full-stack demo application development (HTML, CSS, JS, React, Node.js, Express) and automated demo environments to streamline complex client engagements.
- Used Python for analytics and reporting, contributing to data-driven decisions on positioning and product gaps.

Software Engineer | [Expedia Inc.](#)

Aug 2017 – Apr 2019

- Built APIs in Java Spring orchestrating UI requests, with AngularJS, Node.js, and Express layers handling REST/HTTP/JSON/XML interactions backed by MySQL.
- Engineered CMS enhancements that enabled marketing to author and ship email templates across consumer-facing surfaces.
- Designed API contracts and data requirements for efficient UI/server interactions; participated in standard agile ceremonies.

SELECTED AI & DEVELOPER PROJECTS

Sasha | [Agentic personal context engine \(LangChain / LangGraph / MCP\)](#)

- Designing and building an agentic system with modules for sessions, signals, reflection, and insight, using LangGraph for multi-step orchestration, LangChain for tooling and retrieval, and MCP for tool integration. Working directly with model APIs and SDKs from a developer's perspective informs strong opinions on what makes a model platform's DX feel polished.

AuthQL | [Semantic SQL / YAML query architecture on Snowflake Cortex](#)

- Designed a domain-specific YAML semantic-contract layer with a QuerySpec JSON intermediate representation and a SQL planner enforcing business rules (tenant filtering, MAU semantics, timezone anchoring), enabling natural-language queries over authentication data via Snowflake Cortex LLM serving.

EDUCATION & CERTIFICATIONS

M.S. Computer Science, AI/ML Specialization | [Georgia Institute of Technology \(OMSCS\)](#) In Progress

B.S. Computer Science | [University of Mississippi](#)

Aug 2013 – May 2017
